INTRODUCTION

INTENT

The purpose of this sewer report is to support the sanitary sewer system for the proposed 20,000 sf spa development located at 725 State Route 179 in Sedona, Arizona. This report represents the basis of design criteria that will be used for the engineering design of the proposed development utilizing the standards and guidelines set forth in the Arizona Administrative Code (AAC).

PROJECT DESCRIPTION

Arabella Spa is located within Section 18, Township 17 North, Range 6 East of the Gila and Salt River Base and Meridian, Coconino County, Arizona. The site is bound by Arabella Hotel to the west, Sombart Lane to the north, open space to the east, and residential development to the south, See **Appendix A: Site Location Map**.

Arabella Spa is a proposed 21,000 sf spa development that includes grading, drainage, and utility improvements. The existing zoning of the project is Commercial (CO).

DISTRIBUTION SYSTEM DESCRIPTION

EXISTING COLLECTION SYSTEM

The site is surrounded by existing commercial and residential development. There is an existing sewer main to the north of the site in Sombart Lane where the service line will connect.

PROPOSED COLLECTION SYSTEM

The gravity sewer system will connect into the existing sewer manhole in Sombart Lane. The proposed on-site collection system will connect into the existing main and consist of approximately 555-feet of 4-inch PVC gravity sewer that will collect and convey wastewater flows generated by the spa and restaurant. The system will also incorporate a grease interceptor for building 1 that shall be sized per Arizona Administrative Code and a grease interceptor for building 4.

BASIS OF DESIGN

DESIGN METHODOLOGY

Average Day Demand design flows are calculated based on design criteria detailed within the Arizona Administrative Code. Per Title 18, Environmental Quality chapter 9, Department of Environmental Quality Article 3, Aquifer protection permits part E, a design flow of 20 gallons per employee shall be used for Restaurant/Cafeteria, 6 gallons per meal shall be used for Kitchen Waste, 1 gallon per meal for Garbage Disposal Waste, and 2 gallons per meal for Kitchen Waste Disposal Service. A flow of 200 gallons was used for the restrooms. There are 14 shower units, each requiring a flow of 180 gallons. A design flow of 50 gallons per wash cycle was used for each laundry unit. A design flow of 30 GPD was used for the spas (pools). The steam room flow (sauna) was estimated at 54 gallons. The Arizona Administrative Code also requires a dry peaking factor of 3.62 for new lines and a wet weather infiltration percentage of peak dry flow rate of 10%. See **Table 1** below for a summary of base daily sewer demand flows.

Table 1 Sewer Demands

<i>Building</i>	<i>Use</i>	<i>Sewage Demand Rate</i>		<i>Demand Criteria</i>		<i>Sewage Design Flow [GPD]</i>
		<i>gpd</i>	<i>unit</i>	<i>No.</i>	<i>unit</i>	
Building 1	Restaurant	20	EMPLOYEE	20	EMPLOYEE	400
	Kitchen Waste	6	MEAL	200	MEAL	1200
	Garbage Disposal	1	MEAL	200	MEAL	200
	Kitchen Waste Disposal Service	2	MEAL	200	MEAL	400
	Bar	2	CUSTOMER	100	CUSTOMER	200
	Restroom	200	TOILET	10	TOILET	2000
	Shower	180	SHOWER	14	SHOWER	2520
	Pool	30	POOL	1	POOL	30
	Laundry: 3 Units	50	WASH CYCLE	3	WASH CYCLE	450
Building 2	Pool	30	POOL	1	POOL	30
Building 3	Pool	30	POOL	1	POOL	30
	Pool	30	POOL	1	POOL	30
	Steam Room	54	DAY	1	DAY	54
	Shower	180	SHOWER	3	SHOWER	540
Building 4	Outdoor Kitchen	20	EMPLOYEE	6	EMPLOYEE	120

	Kitchen Waste	6	MEAL	25	MEAL	150
	Garbage Disposal	1	MEAL	25	MEAL	25
	Kitchen Waste Disposal Service	2	MEAL	25	MEAL	50
	Outdoor Bar	2	CUSTOMER	50	CUSTOMER	100
	Restroom	200	TOILET	2	TOILET	400
	Pool	30	POOL	1	POOL	30
	Pool	30	POOL	1	POOL	30
Total						8,989
Peak Flow (With Dry Peaking Factor)						32,450
Peak Flow (Wet-Weather)						35,704

Per the Arizona Administrative Code (AAC), the proposed sewer lines were designed to achieve full flow velocity between 2 and 10 feet per second. To satisfy these requirements the proposed private 4-inch sanitary sewer will be designed with a minimum slope of 0.009 ft/ft. See **Appendix C** for pipe slope calculations.

WASTEWATER SYSTEM ANALYSIS AND RESULTS

To determine the capacity of the proposed wastewater collection system, the peak design flow was analyzed within the minimum design pipe slope. At the minimum design slope of 0.125 in/ft (1/8"/ft), a 4-inch, has the capacity to convey approximately 125,532 gallons per day. A proposed system can convey the proposed peak design flow of 35,704 gallons per minute at a d/D ratio of 0.45. **See Appendix C – Flowmaster Calculations** for pipe capacity calculations.
